

Cyber Security Engineer 1

Job summary

If you have experience implementing and maintaining cyber security programs, assisting with the confidentiality, integrity, and availability of technical infrastructure and data, participating in ongoing enforcement and monitoring activities, network access control, and security awareness training; we encourage you to apply for the [Cyber Security Engineer](https://100hires.com/cyber-security-engineer-job-description.html) position.

We are seeking qualified candidates for a full-time Cyber Security Engineer. The [Cyber Security Engineer](https://100hires.com/cyber-security-engineer-job-description.html) will work as a part of a five-person security team made up of a technical lead, project manager, and several cyber security engineers.

Responsibilities

Assists with planning, implementation, and maintenance of a comprehensive enterprise-wide security program that protects the court system's information systems.

Effectively responds to all reported security incidents and other reports of suspicious activity.

Manages user accounts; assures defined user authentication procedures are strictly followed for new account creations, account terminations, and account authority changes; performs routine user account auditing.

Monitors networks and computer systems for security breaches, through use of software that detects intrusions, anomalous system behavior, and unauthorized network-attached devices.

Plans and participates in cyber security improvement projects for the purpose of maintaining a mature security program for the courts.

Ensures all operating systems and software applications in the court system enterprise are up-to-date with security patches as required by the IT Security Program.

Requirements

College level courses in network security, computer support, networking, or related field.

Experience performing complex technical implementations with cyber security responsibilities.

Experience as member of an enterprise technology support/implementation team.

Demonstrated competencies in cyber security technologies.

Cyber Security Engineer 2

Job summary

The [Cyber Security Engineer](https://100hires.com/cyber-security-engineer-job-description.html) will be expected to leverage open-source technology and industry standard programming languages to enhance cyber security operations. Success in this role will require delivery of engineering, software development, and build-automation projects

in an agile environment.

Responsibilities

Provide high-quality, cost-effective engineering within platform to streamline and expedite incident response workflows
Builds automation around operations & software development processes (CI/CD)
Works with cross-functional teams and cross-business teams to drive broad-reaching technology initiatives
Promotes best practices, design patterns, standards through workshops, knowledge sharing, and code walk-throughs
Provides mentorship, advice, and skill enhancement to junior team members
Participates in on-call after-hours support rotation to ensure that critical performance issues are resolved in a timely manner, in accordance with established customer expectations and SLAs

Requirements

A Bachelors Degree in Computer Science or STEM (Science, Technology, Engineering and Math)
Minimum 4 years of relevant work experience
Experience with object oriented and scripting programming languages (e.g. Python, C++, JavaScript, Java)
Experience interacting with APIs to develop applications
Knowledge of CI/CD and automation tools (e.g. Git, Jenkins)
Experience working in a CIRT or Cyber Fusion Center environment
Foundational cyber security knowledge in at least one area (e.g. architecture, attacker methodologies, digital forensics, incident response)
Excellent verbal and written communication skills
Excellent organizational and analytical skills, including experience using at least one development/release framework (e.g. Agile, Waterfall)
Detail oriented with the ability to multi-task and prioritize efforts
Ability to collaborate in a team environment

Cyber Security Engineer 3

Job summary

The [Cyber Security Engineer](https://100hires.com/cyber-security-engineer-job-description.html) will be responsible for engineering and implementing Company's Cyber Security program initiatives. This critical role ensures Company's data are protected from unauthorized access and disclosure. We believe safeguarding our customers' and partners' information is more than just checking a box for compliance reasons; we believe it's the right thing to do. We also believe a strong, adaptive Cyber Security program creates a virtuous cycle, one that builds trust with our customers and partners, which attracts more customers and partners, and so on.

This role requires the individual to balance the needs of the businesses and available resources while developing and implementing solutions to secure the company. We expect the person in this role to apply cyber security industry best

practices (NIST, CSA, OWASP, ISO) to evolve Company's existing processes and technology at the pace of the business growth. You will be working with members across the enterprise, including technology, product, finance, and other parts of Company to understand their current cyber security state, then identifying gaps and engineering solutions to align with the security program initiatives. You will own both the engineering, implementation, and documentation functions related to security. You will also work closely with the IT Support and System Reliability Engineering teams to operationalize the solutions for the endpoints, infrastructure, and cloud services.

Responsibilities

Collaborate with business and technical members across to the enterprise to understand the current cyber security state

Identify gaps between existing controls and Company's cyber security roadmap

Engineer the solutions (processes, technologies) to mitigate the control gaps

Present the proposed solutions to the Senior Information Security Officer

Document and implement the new security controls

Collaborate with IT Support and Site Reliability Engineering (SRE) to operationalize the controls

Develop FAQ/Wiki to communicate new security capabilities to the enterprise

Take part of on-call rotation to triage any potential security incidents

Requirements

In-depth knowledge of cloud technology and security (AWS, Terraform)

In-depth knowledge of information security domains (physical, networking, application)

In-depth knowledge of information security best practices (NIST, CMMC, CSA, OWASP, ISO)

Knowledge of application security (static analysis, dynamic analysis, automated testing)

Knowledge of operating systems (Linux, Windows)

Knowledge of virtualization technologies (Docker/Kubernetes)

Knowledge of scripting languages (Powershell, bash)

Curiosity and passion for all things security and technology related

Willingness to ask for as well as provide help when needed

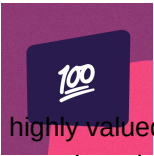

Strong verbal/written communication and presentation skills, including an ability to effectively communicate with both business and technical teams

Ability to influence others, strong attention to detail, excellent organization skills, and ability to time manage multiple projects

Cyber Security Engineer 4

Job summary

Join our team as a Cyber Security Engineer. The [Cyber Security Engineer](https://100hires.com/cyber-security-engineer-job-description.html) is an integral role within the System Administration Department, and as such, all ideas, input and constructive recommendations will be

highly valued. We are looking for a well-rounded individual that can speak with business leaders and design and support security solutions. This position requires a highly motivated team player who enjoys learning and being part of a forward thinking and client service-oriented culture.

Responsibilities

- Implement security solutions (SIEM, EDR, IPS, IAM, app whitelisting, endpoint security, or user awareness).
- Assist in security event/incident investigations on detected alerts.
- Provide Virtual CISO services and guidance on prioritizing and reducing cyber risk.
- Help cultivate an information security aware and conscious culture.
- Present cyber security solutions.
- Provide excellent customer service to all clients.
- Create and maintain documentation for all supported applications and customer data.
- Follow change management procedures.
- Participate in an on-call rotation to support customers and systems.
- Perform any additional job-related duties needed to help drive our vision, fulfill our mission, and provide our Members with industry leading customer service.

Requirements

- Networking or Firewall Administration
- Vulnerability Management
- Risk Management
- Security Strategy & Engineering
- EDR / MDR Admin
- IAM
- User Awareness training
- Scripting, development, and automation
- Experience working with executive leadership
- Group presentation experience
- Possess an Associate degree in Telecommunications, Engineering, Computer Science, or equivalent industry experience. Certifications are a plus – CISSP, CISM, GIAC, SANS, OSCP, CCSP, CEH

Cyber Security Engineer 5

Job summary

We are seeking a [Cyber Security Engineer](https://100hires.com/cyber-security-engineer-job-description.html) who is able to develop, test, and document software systems to specifications.

Responsibilities

Develops, tests, and documents software systems to specification

Complies with internal and external standards

Performs peer reviews of team members' designs, code, and documentation

Proficiency in multiple Programming languages

Knowledge of programming theory

Threat Models

Secure Software practices

Secure Boot

Penetration Testing

Requirements

BS degree in Computer Science or related field.

10-15 years professional experience developing complex software systems on multiple platforms.

Solid understanding of programming theory and analysis

Experience with multi-threaded programming

Knowledge of automated test techniques and tools.

Ability to take initiative and carry out project tasks with minimal supervision.

Strong problem solving skills, attention to detail, and the ability to work as a [team member](https://100hires.com/team-member-job-description.html) to creatively and cooperatively solve problems and complete tasks.

Attention to detail and accurate record keeping abilities are a must.

Proficiency with English language both written and verbal communication.

Cyber Security Engineer 6

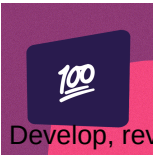

Job summary

We have an exciting opportunity to join us in supporting one of our valued customers as a Cyber Security Engineer.

Responsibilities

Comply with RMF, DoD Directive (DoDD) 8500.01E, DoD Instruction (DoDI) 8500.2, DoDI 8500.01, and DoDI 8510.01 and other Cyber Security guidance and directives as applicable.

Ensure engineering activities (analysis, design, implementation, maintenance, and monitoring) best meets (as resources allow) established requirements (e.g., RMF & DISA Security Technical Implementation Guide).

Develop, review, and refine Continuity of Operations (COOP) package documentation and related artifacts.

Review and provide inputs to the creation and maintenance of Enterprise Mission Assurance Support Service (eMASS) package for Certification and Accreditation (C&A).

Requirements

Must have a current Security + certification. CISSP certification is desirable.

Candidate should have an understanding of the RMF process.

Must be detail oriented and possess the ability to work in a multi-disciplined environment with an adaptive personality.

Candidate should have excellent communication skills - both oral and written - and possess analytical skills to identify and fault isolate problems/issues, accurately assess relevance of information, generate and evaluate alternatives, and provide solution recommendations.

Demonstrated knowledge of cloud based architecture is desired.

Proficient in Microsoft Office applications (e.g., Word, PowerPoint, Excel, Access, and Outlook).

Bachelor's Degree in a related technical discipline and a minimum of 5 years work experience.

Cyber Security Engineer 7

Job summary

In this [Cyber Security Engineer](https://100hires.com/cyber-security-engineer-job-description.html) role, you'll be responsible for supporting key security technology. You will manage architecture, design, implementation, and ongoing operations in a DevOps model. You will focus on automation, integration, service resiliency and business partnership.

Responsibilities

Serving as [technical lead](https://100hires.com/technical-lead-job-description.html) to support and onboard new security technologies and expand capabilities of existing systems

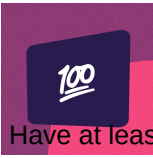

Defining, designing, and building enterprise cybersecurity solutions to protect against advanced cybersecurity threats across our diverse environment

Developing use cases, threat detection logic and rules, and alerting in SIEM for response by Incident Detection & Response analysts

Working with Incident Detection & Response to identify and recommend new internal and external data sources to develop additional threat detection logic

Operationalizing Indicators of Compromise from intelligence feeds by developing, testing, deploying, monitoring and alerting rules into SIEM

Requirements

Have at least 5 years experience in assessing, architecting, designing, and implementing cyber security capabilities, including incident response, threat intelligence, security monitoring, and vulnerability management

Have experience with core enterprise infrastructure and security-supported technologies including data protection elements such as DLP, tokenization, encryption, endpoint security, and perimeter protection such as firewalls or WAF, SIEMs, IPS/IDS, and managed security services

Have Scripting experience with Bash, PowerShell, or Python and Security engineering experience with Windows, Linux, and Mac

Have experience developing detection logic for enterprise SIEM systems and with exploitation techniques and use case development

Have experience developing threat indicators for developing SIEM alarms and correlated alerts and IOC datasets(e.g., YARA, OpenIOC)

Have experience with cybersecurity tools and software, E.g. Splunk, McAfee, CrowdStrike, Windows Defender, SELinux, Syslog, Palo Alto, and Cisco

Cyber Security Engineer 8

Job summary

We are seeking a [Cyber Security Engineer](https://100hires.com/cyber-security-engineer-job-description.html) who under limited direction, develop security plans, policies, and designs. Configure, install, test, and turnup designed solutions for production use in government networks.

Responsibilities

Develop security plans, policies, and designs.

Configure and implement security solutions based upon the customer's performance criteria and specifications

Conduct systems pre-test and acceptance tests to validate the designed performance criteria

Collaborate with government and /or subcontractors at customer site for security solution integration into existing infrastructure

Develop and perform technical presentations for customers

Serve as technical resource at customer briefings

Mentor junior engineers and technicians

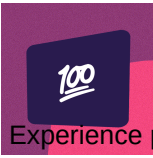

Serve as [technical lead](https://100hires.com/technical-lead-job-description.html) on projects

Perform other duties as required

Requirements

Knowledge of risk assessment tools, technologies, and methods

Experience designing secure networks, systems, and application architectures

Experience planning, researching, and developing security policies, standards, and procedures

Ability to communicate network security issues to peers and customers

Experience designing and implementing Commercial Solutions for Classified Multi-Site Connectivity Capability Package desired

Proficient in Microsoft software applications and other software applications as required, including Microsoft SharePoint Systems integration experience

Excellent interpersonal and presentation skills

Good oral and written communications skills

Experience in using drawing tools such as Microsoft Visio or AutoCAD is desired

Cyber Security Engineer 9

Job summary

The [Cyber Security Engineer](https://100hires.com/cyber-security-engineer-job-description.html) is responsible for supporting, administering, maintaining and optimizing infrastructure hardware and software. Will also participate in planning and executing IT security strategy including vulnerability management, security policy development and awareness training development.

Responsibilities

Supports, administers, maintains and optimizes infrastructure hardware and software. This includes but is not limited to network, telecommunications, security (including VPN and firewall), server, storage and datacenter components consisting of significant investment in the most advanced technical IT solutions.

Assists with strategic plan development, budget preparation and implementation of core IT infrastructure components.

Provides advanced level support to customers and coworkers for problems and issues reported through the IT Service Management system.

Liaise with customers, other IT staff and vendors for design, planning, implementation and problem resolution.

Responsible for performance monitoring and capacity planning on assigned solutions.

Provides guidance and assistance with creation and maintenance of standards, policies and procedures within role specific responsibilities.

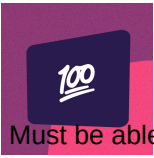

Requirements

Associates or other Technical Degree in Information Technology or Computer Systems or equivalent experience/expertise

Advanced IT System Certification, as appropriate/applicable

Two years of relevant IT solutions experience/expertise

Experience with Cisco and Palo Alto security environments preferred

Must be able to maintain a positive attitude within a fast paced IT security environment

Cyber Security Engineer 10

Job summary

We are looking for a [Cyber Security Engineer](https://100hires.com/cyber-security-engineer-job-description.html) to join our team.

Responsibilities

- Apply an interdisciplinary, collaborative approach to plan, design, develop, validate and verify solutions across the lifecycle.
- Conduct cyber risk assessment activities including threat modeling, vulnerability analysis and analysis of mitigation solutions.
- Coordinate and addresses Supply Chain risk management concerns.
- Develop, evaluate and analyze design constraints, trade-offs and detailed system and security design as they pertain to the domain.
- Coordinate with system architects and developers to provide oversight in the development of solutions.
- Conduct cybersecurity test and evaluation of hardware and/or software designs to verify and validate compliance with defined specifications and requirements.
- Employ cyber security processes, methods, techniques and tools and assure their consistent application.
- Implement appropriate Assessment and Authorization activities as required by customers.

Requirements

- CISSP certification (or ability to obtain within 6 months of hire).
- Cloud development experience.
- Experience implementing and validating RMF/ICD503 security requirements.
- Experience developing Assessment & Authorization packages.
- Experience performing cybersecurity activities in support of software and system requirements, design, development, testing, and sustainment.
- Experience with XACTA, eMASS, HBSS, ACAS, SCAP Compliance Checker (SCC), DISA.
- Experience with Secure Configuration/Hardening of DoD Information Systems.
- Experience with RHEL.
- Experience with SIEM technologies.
